When a patient is going to be an eye donor, please perform SEE as soon as possible.

**PERFORM SEE**

- **S**aline drops in each eye.
- **E**levate the head to 30 degrees.
- **E**yelids closed. Do not tape eyelids closed.

After the family leaves the hospital, please place lightweight ice packs over the closed eyelids. Performing SEE and placing ice packs will help the corneas be better for the transplant recipient.
